

5:1 SDSL across the country

Fluidata have always had the best possible SDSL availability, offering uncontended (1:1) services through any SDSL enabled exchange – over 800 nationwide. Now the rollout has begun on 5:1 SDSL, which will initially be available at 400 exchanges nationwide.

Businesses will be able to enjoy the benefits of Fluidata's 24/7 support and uncontended network, while maximising on the cost savings a 5:1 contention ratio affords. In the past our 1:1 service was typically best suited to those moving from legacy leased lines; now the 5:1 service will make it possible for those suffering from poor ADSL, or slow ISDN, to upgrade affordably.

Costing less to setup and run than BT's 10:1 SDSL, with Total Care support and free static IP addresses as standard, and pricing from £100 pcm, there are plenty of benefits. Fluidata also offers a complete range of complementary services, including managed routers, as well as VPN and firewall configuration.

Activation is still only £250, which includes a new dedicated BT line for the service. On top of this, there is a clear upgrade path available, as the 5:1 service can be upgraded to 1:1, and if necessary to the industry leading PureFluid service – capable of symmetric speeds up to 40Mb/s.
