

PureFluid reaches further

Fluidata proudly releases higher bandwidth options for its PureFluid service, now capable of supporting symmetric speeds up to 40Mb/s. Building on the established PureFluid ethos we exploit connectivity technologies to their full potential, delivering fast and reliable business connectivity solutions.

PureFluid is now available across the UK, with popular options at 4Mb/s, 10Mb/s and now 20Mb/s, scalable as required to 40Mb/s. The solution is unique in it's ability to aggregate multiple internet circuits, from if necessary, multiple ISPs to provide extra redundancy and fail-over. As a true leased line alternative (LES10, Megastream etc.) the service features guaranteed bandwidth, a 99.9% uptime SLA and fully managed hardware, all backed up by Fluidata's 24/7 technical support.

Naturally, in accordance with Fluidata's fair pricing policy, PureFluid is highly competitive in the marketplace, affording businesses a real choice against legacy internet and point-to-point leased line services.
